

OrthaPrime+

Primer for PU

Technical characteristics & usage advice

For perfect bonding when working with PU materials

One component Primer for working with Polyurethane. Primer helps in the preparation of PU foams for the application of adhesive.

Features and Benefits:

- Modifies surface area of PU to allow for perfect adhesion which can be difficult due to porous nature of the foam.
- Improves heat resistance to the specific adhesion of some materials, improves the resistance to hydrolysis and the migration of greases and plasticizers.
- Available in long-lasting 1 litre tins.

Storage: Keep in cool place - protect from direct light

Application: by brush (without metallic parts)

Drying time before bonding: 2-10 Mins.

Application:

Adhesives should be applied immediately after the application of Primer on the substrate.

Take care in dusty or humid environments with high temperature variations.

Ordering Information:

RA1292 1 Litre

Warnings:

- Never use with Metallic parts.
- Avoid contact with skin or eyes.
- Protect hands with rubber gloves at all times.
- Use in well ventilated room.
