

Algefoam Soft & Light EVA Foam Sheets

Technical characteristics & usage advice

Algefoam is a low density EVA foam, which is easily mouldable at 140°C. It is hard wearing with very good abrasion resistant properties making it an ideal orthotic lining material. This skin friendly foam is toxic-free, washable, heat mouldable, grindable and can be fine sanded to create an exceptional finish. Algefoam ensures great looking, high-performance appliances made to last and endure. It has good thermal properties and is conformable and unlikely to breakdown or bottom out.

Features:

- Promotes healing
- Thermal properties
- Long-lasting
- Grindable and fine sandable
- Comfortable and durable
- Abrasion resistant

Application:

Orthotics, splint padding, seating, prosthetic linings, orthopaedic padding, insole covers, brace padding, flooring, boating, watersports crafts and DIY projects.

Heat mouldable between 120°C and 140°C with an average oven time of 2 minutes per mm.

Shore A20

Dimensions: 2000mm x 1000mm
