

# Coolmax Insole and Brace Lining Sheet

## Technical characteristics & usage advice

Coolmax is an effective fibre-based moisture management system. It is specifically engineered to transport perspiration away from the body through the fabric's surface where it can be quickly evaporated to ensure the skin is always dry. Ultimately, this fabric allows the wearer to feel cool and comfortable. This breathable material enhances thermo-regulatory effect providing superior comfort for the wearer.

### Features:

- Wicks away moisture from the body
- Dries faster than competitive fabrics
- Keeps the body cool, dry and comfortable
- Breathable and reduces skin temperature
- Soft and lightweight
- Resistant and durable suitable for a wide range of applications

### How it works?

Coolmax Fabric is made from specially designed polyester mix which features an increased surface area. The special four or six channel mix forms a transport system that pulls moisture away from the skin to the outer layer of the fabric and thereby thermoregulates the body by a process called evaporative cooling.
