

PE-LITE Foam Sheet

Technical characteristics & usage advice

Pe-Lite is an expanded cross-linked white or beige PE foam material. It is lightweight, soft to the touch and moisture-resistant. It is commonly used for lower-limb prosthetics - generally as cushioning inner liner between the stump and the socket.

Features:

- Closed-cell structure.
- Attractive appearance – soft to touch.
- High resistance to wear and tear.
- Temperature resistance between -60°C and +90°C.
- Can be heat moulded, vacuum formed, laminated, glued, butt welded and can be combined with other foams.

Sold per Sheet: 1m 1m
