

## Silana Orthotic Covering

### Technical characteristics & usage advice

The Micro-Fibre Orthotic covering range is High-quality, synthetic suede material. Its unique mono-layer structure contains bundles of ultra microfibres, as fine as 0.001 to 0.2 deniers, which are densely bundled and entwined. This structure is the key behind the material's exceptionally soft and supple texture, which rivals that of natural suede.

#### Features:

- Fast and flexible adoption
- Suede like touch
- High resistance to abrasion
- Cheaper than real suede
- High quality consistency
- Breathable
- Environmentally friendly production

#### Application:

Orthopaedic linings and insole top covers.
